

BIJIN BENNI

Software Test Engineer | QA Automation | Payments & POS Systems
Dubai, UAE • +971 52 144 3349 • bennybijin@gmail.com • [linkedin.com/in/bijinbenni](https://www.linkedin.com/in/bijinbenni)

PROFESSIONAL SUMMARY

Software Test Engineer with 3+ years of experience delivering high-quality payments, POS, and ECR applications across UAE enterprise clients including Emirates NBD. Hands-on expertise in manual, functional, regression, and API testing, with strong capabilities in end-to-end test execution, SQL validation, and defect lifecycle management in Agile/Scrum environments. Specialized in ISO 8583 and EMV-compliant transaction testing across .NET, Java, Android, and Web Service integrations. Known for fast issue replication, clean defect reporting, and reliable UAT and production support that consistently reduces post-release defects.

CORE SKILLS

Testing & QA: Manual Testing • Functional Testing • Regression Testing • Test Automation • System Integration Testing (SIT) • UAT Support • Smoke & Sanity Testing • End-to-End Testing • Exploratory Testing • API Testing • Quality Assurance • Cross-Browser & Cross-Device Testing

Payments Domain: ISO 8583 • EMV (Contact, Contactless, NFC) • POS Terminals (Traditional & Android) • ECR Integration • PCI-DSS Awareness • Acquirer/Issuer Flows • TMS (Terminal Management Systems)

Tools & Platforms: Postman • JIRA • Selenium • Git • Microsoft SQL Server • MySQL • PostgreSQL • IIS • FTP • Android APK Tools • Visual Studio • Postman/Newman • Excel for test data

Test Process: STLC • SDLC • Agile/Scrum • Kanban • Test Case Design • Test Plans • RTM (Requirement Traceability Matrix) • Defect Lifecycle Management • Root Cause Analysis • Bug Triage

Programming & Query: SQL (Joins, Stored Procedures, Data Validation) • Python • JavaScript / React • REST APIs • JSON • XML

PROFESSIONAL EXPERIENCE

Software Test Engineer Feb 2023 – Present
OMA Emirates Group LLC Sharjah, UAE

- Execute end-to-end functional, regression, and integration testing for traditional and Android POS terminals, validating 99.5%+ transaction accuracy across credit, debit, contactless, and wallet payment flows.
- Test ECR (Electronic Cash Register) integrations across .NET, Java, and Web Service stacks, ensuring strict compliance with ISO 8583 message standards and EMV Level 2 requirements.
- Validate payment transactions end-to-end by inspecting ISO 8583 request/response fields, decoding EMV tags, and running SQL queries against MS SQL Server to confirm host and switch-side data integrity.
- Design and maintain test cases, test data, and traceability matrices aligned with client UAT scenarios, contributing to a 20% reduction in post-release defect leakage.
- Provide on-site and remote UAT and production support to enterprise banking and retail clients, replicating issues, performing root cause analysis, and coordinating fixes with developers in Agile sprints.
- Configure and troubleshoot Web TMS, IIS, FTP, and Android APIs to set up test and production environments, cutting environment provisioning time by ~30%.
- Manage APK build deployment and version control across merchant terminals, supporting smooth rollouts across multiple client environments.
- Log, track, and verify defects through full lifecycle (New > Fixed > Retest > Closed), maintaining clean reports and clear reproduction steps for engineering teams.

Done.ae – Emirates NBD

End-to-End QA for Emirates NBD's Digital Payments & Lifestyle Super-App

- Led end-to-end testing for Done.ae, Emirates NBD's digital payments and lifestyle super-app, covering the full transaction lifecycle — payment initiation, authorisation, processing, and confirmation — across web and mobile channels.
- Designed and executed comprehensive test scenarios for bill payments, money transfers, card-linked purchases, and wallet top-up flows, ensuring zero critical defects at UAT sign-off and production go-live.
- Validated REST API integrations between the Done.ae front-end and back-end payment services using Postman, verifying request/response payloads, error handling, timeout behaviour, and edge-case scenarios.

- Wrote and executed functional and API test cases for web applications built on Python (Flask/Django) and React.js, contributing to improved sprint-level defect detection.
- Performed database testing across PostgreSQL, MySQL, and MongoDB by validating schema, data integrity, and query performance, supporting a 25% reduction in slow-query incidents.
- Collaborated with developers, BAs, and QA leads in Agile sprints, participating in daily stand-ups, sprint planning, and retrospectives.
- Built and shipped full-stack features alongside testing duties, gaining a developer-side understanding of code that strengthens test design and root-cause investigation.

EDUCATION

B.Tech, Computer Science Engineering

2018 – 2022

Providence College of Engineering, Chengannur, Kerala, India

KEY ACHIEVEMENTS

- **Defect Leakage Reduction** – Cut post-UAT defect leakage by ~20% through structured regression cycles, RTM coverage, and early-stage exploratory testing.
- **Payments Accuracy** – Validated ISO 8583 message flows and EMV scenarios across 1,000+ test transactions, achieving 99.5% transaction accuracy on production POS rollouts.
- **Faster Environment Setup** – Reduced POS test-environment provisioning time by ~30% by standardising IIS, TMS, and FTP configuration procedures.
- **Client UAT Success** – Delivered on-site UAT support for multiple UAE banking and retail clients, contributing to a 15% improvement in client-reported satisfaction on QA handovers.
